PERSONAL PROFILE

Highly motivated and team-focused software developer with 10+ years of experience developing code and creating test environments and infrastructure independently and within a team structure

TECHNICAL SKILLS

- Programming Languages: Elixir, C, Python, YAML, Go, Rust
- Software Environments: Windows, Mac, Linux, Godot, CLI, Docker, Kiro, AWS
- Well versed in application design, development and testing within an agile development cycle
- Various automation tools such as Bash, Jenkins, Gitlab CI, Postman and various scripting languages (Python, Go, YAML, Locust, Terraform)
- Proficient in testing many different aspects of distributed systems (micro systems, REST API, Infrastructure as Code)
- Expertise with data analysis and using and developing data analytics tools (New relic, Sumologic, in-house tools)
- Knowledge and experience with computer security, security vulnerabilities and security testing in a professional and personal setting
- Experience developing and launching several solo game development projects as well as presenting said projects to an interested audience

WORK EXPERIENCE

SENIOR SOFTWARE DEVELOPER IN TEST

Genesys Cloud Services (Performance Team)

Jan 2022 – Present

- The designated analytics team collaborator for the entire performance team. Key aspects of this included fully understanding the data behind the analytics gathered, as well as being in constant touch with the analytics team. I also created a system wide script that would run twice a month to check that our test environment workload was matching up with the analytics related throughput in production.
- Taking on epics to test new features being introduced to our product. This involved thoroughly understanding the new feature and how it could be tested. Reaching out to the team behind said feature and finding out how they would like it to be tested. Implementing an agreed upon test case as well as documenting the results all within a prompt time frame
- Developed and incremented upon in house testing tools (Python, Go, YAML, Locust) to help make the daily workload easier to test against and collect data with

SOFTWARE DEVELOPER

Clear Blue Technologies

Aug 2017 – Dec 2021

- Adding features and fixing issues with various controllers using the functional programming language Elixir.
- Built multiple varieties of automated black box testing devices and accompanying infrastructure with the controller, a raspberry pi, a programmable power supply, terraform and elixir code from scratch.
- Developed automated black box front end testing infrastructure of the company web service across Chrome, Firefox and Safari using the node.js automation tool "Testcafe".

SOFTWARE TEST SPECIALIST

IBM (Appscan Source team)

Jun 2014 – Aug 2016

- Created a test tool in HTML and Javascript with API usage for developers to more efficiently test builds using subsets of smoke tests.
- Multiple presentations to stakeholders, architects and developers on security vulnerabilities, demoed security programs.
- Integrated Juliet test suite into the Appscan Source test automation system using Java.
- Developed, debugged, executed and maintained bash testing scripts.
